Continuation of 2. NOTE: The proposed amendment(s) will not be entered because claim 51 raises new issues that would require further consideration and/or search, and claim 51 is not deemed to place the application in better form for appeal by materially reducing or simplifying the issues for appeal.

Continuation of 5. does NOT place the application in condition for allowance because: Applicants' arguments are directed to the newly proposed or amended claims and that amendment has not been entered. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., sustained release dosage form from an implanted osmotic pump, administration to non-parathyroidectomized patients) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). The argument that the references do not suggest tooth movement with continuous administration is simply not credible in view of the observation of tooth movement in the presence of PTH. Patentability requires novelty and unobviousness in light of the prior art, not in light of what the inventor knew and included in his patent application. The "continuous" administration of the present claims does not distinguish over the administration of the prior art. Although Applicants refer to Exhibits 1, 2, and 3, these Exhibits are not of record in the present application. Furthermore, entry of a new amendment, new affidavit, or other new evidence in an application on appeal is not a matter of right. The entry of an amendment (which may or may not include a new affidavit, declaration, or exhibit) submitted in an application on appeal continues to be governed by 37 CFR 1.116, and the entry of a new affidavit or other new evidence in an application on appeal is governed by 37 CFR 1.195.
